Item 99 (bb) of the provisional agenda*
General and complete disarmament: transparency in armaments

United Nations Register of Conventional Arms

Report of the Secretary-General

Summary

The present report contains information received from Member States on the export and import of conventional arms covered by the United Nations Register of Conventional Arms, as well as additional background information on military holdings, procurement through national production and the international transfers of small arms and light weapons for the calendar year 2009. As at the date of the present report, the Secretary-General had received reports from 51 Governments.

	Views received from Governments in accordance with paragraph 6 (a) and (b) of General Assembly resolution 64/54		129

I. Introduction

1. The present report is the eighteenth consolidated report on the United Nations Register of Conventional Arms issued by the Secretary-General since the establishment of the Register.[1] It is submitted pursuant to General Assembly resolution 64/54. It contains data and information provided by 51 Governments on the international transfers of major conventional arms covered by the Register and additional background information for the calendar year 2009. Any further national reports and additional information received from Governments will be issued as addenda to the present report.

2. The Office for Disarmament Affairs organized two regional workshops on transparency in armaments: one for the region of Latin America and the Caribbean, held in Lima, on 9 and 10 March 2010, and one for South-East Asian States, held in Bali, Indonesia, on 31 March and 1 April 2010. The workshops were aimed at raising awareness about the United Nations Register among the representatives of countries in those regions, enhancing their practical skills in terms of compiling national reports and encouraging greater participation in the Register in those regions.

3. The Office also continued to maintain the Register's database and to update the information about the operation of the Register on its website. All relevant information is available at www.un.org/disarmament/convarms/Register/HTML/RegisterIndex.shtml.

II. Information received from Governments

4. Information received from Governments is presented below as follows.

(a) Section II, which includes:

(i) Part A — an index of information received by the Secretary-General;

(ii) Part B — individual replies of Governments on the transfers of conventional arms;

(b) Section III, which contains background information submitted by Governments on military holdings and procurement through national production;

(c) Section IV, which includes background information submitted by Governments on the international transfers of small arms and light weapons;

(d) An annex, containing the views of Member States provided in response to paragraph 6 (b) of General Assembly resolution 64/54, on "whether the absence of small arms and light weapons as a main category in the Register has limited its

[1] The first to seventeenth reports were issued under the following symbols: A/48/344 and Corr.1-3 and Add.1-3; A/49/352 and Corr.1-2 and Add.1-4; A/50/547 and Corr.1 and Add.1-4; A/51/300 and Add.1-5; A/52/312 and Corr.1-2 and Add.1-4; A/53/334 and Corr.1-2 and Add.1-2; A/54/226 and Corr.1 and Add.1-6; A/55/299 and Corr.1 and Add.1-6; A/56/257 and Corr.1 and Add.1-2; A/57/221 and Corr.1-2 and Add.1-3; A/58/203 and Corr.1-2 and Add.1-2; A/59/193 and Corr.1-2 and Add.1-2; A/60/160 and Corr.1-2 and Add.1-3; A/61/159 and Corr.1-2 and Add.1-3; A/62/170 and Add.1-3; A/63/120 and Add.1-3; and A/64/135 and Add.1-3.

relevance and directly affected decisions on participation". Where appropriate, the relevant parts of the notes verbales of permanent missions are reproduced.

5. Part A of section II, "Index of information submitted by Governments", is provided for ease of reference. As regards the information contained in the index, it should be noted that a "yes" denotes a submission of data regarding imports and/or exports in relation to the seven categories of arms covered by the Register during the reporting period. For the purpose of uniform tabulation, Government responses that contained either "nil", "none", "0" or a dash (—) or otherwise indicated that no exports and/or imports in the categories covered by the Register had taken place are reflected in the tables as "nil" reports. A blank space under "Data on imports" and/or "Data on exports" in the index indicates that no information was provided. In some cases, an explanation can be found in the note verbale of the country in question, as indicated above. Only those parts of the standardized forms that contain specific data and notes verbales of Governments providing relevant information are reproduced in section B. Replies made on the standardized reporting form or the simplified "nil" reporting form or in notes verbales containing "nil" or blank reports are listed in the index only.

[a] For the purposes of this report, procurement from national production is defined as complete weapons systems within the seven categories of weapons covered by the Register, purchased by the Government during 2009 from suppliers within Germany or from co-production programmes in which Germany is a partner.

German policy and practice on exports of conventional weapons and related technology

The Federal Republic of Germany consistently pursues a restrictive export control policy as regards both armaments and dual-use goods intended for military purposes. The policy is based on article 26 of the Basic Law (constitution), obliging the State to control war weapons at all stages from manufacture to marketing. That constitutional obligation is given statutory form through the war weapons control act, the foreign trade and payments act and the foreign trade and payments regulation. In order to underline its political will to pursue a restrictive arms export policy and render transparent the way in which that policy is administered, the Government of the Federal Republic of Germany, on 19 January 2000, adopted a thoroughly revised version of the Political Principles Governing the Export of War Weapons and Other Military Equipment.

The restrictive arms export policy of the Federal Republic of Germany means in essence that war weapons may in principle be exported only to countries of the European Union (EU) and the North Atlantic Treaty Organization or countries that have been granted equivalent status by a special decision. Deliveries to other countries are permitted only in exceptional and precisely defined circumstances. A key factor in deciding whether to grant an export licence is conditions within the recipient country, in particular the human rights situation. Furthermore, deliveries must not contribute to the exacerbation of existing tensions. Finally, special attention is being paid to ascertaining the definitive end-use in the country of destination. At the end of the 1980s, intensified efforts by a number of countries to acquire equipment for the development and manufacture of weapons of mass destruction and delivery systems resulted in the extensive reform and further

tightening of the German arms export control regime, notably concerning dual-use goods.

The Federal Government is committed to harmonizing arms export control policy both at the level of the European Union and at the international level. A major step towards the achievement of that aim was the adoption by the European Council, on 8 June 1998, of the EU Code of Conduct on Arms Exports. It lays down eight common criteria for arms exports and procedural rules for the cooperation of EU member States in this field. This common basis of European arms export control was made legally binding on 8 December 2008, when the European Council adopted a Common Position containing a revised and strengthened version of the Code of Conduct. The EU regulations on export controls for dual-use goods, which came into force in their revised version in 2000 (European Council dual-use regulation 1334/2000 of 22 June 2000, together with the most recent amendments by Council regulation 428/2009 of 5 May 2009), have contributed to greater harmonization in this field. The Federal Republic of Germany is actively involved in the various international control regimes for the prevention of the proliferation of weapons of mass destruction and delivery systems (Nuclear Suppliers Group, Australia Group, Missile Technology Control Regime). With the Wassenaar Arrangement on Export Controls for Conventional Arms and Dual-Use Goods and Technologies, which was set up in 1996 with the collaboration of the Federal Republic of Germany, a comprehensive, general exchange of information among participating Governments has been agreed and a gap in the existing control system closed. This regime, too, is designed to harmonize arms export regulations and procedures.

More detailed information regarding the policy principles of the Government of Germany regarding the export of war weapons and other military equipment can be obtained at the United Nations Office for Disarmament Affairs or on its website at http://www.un.org/disarmament/convarms/NLDU/html/NLDU.shtml.

Norway

Procurement through national production

The Kingdom of Norway procured the following in 2009:

1 X Fridtjof Nansen class frigate

The F-310 Fridtjof Nansen class frigate was produced by Navantia shipyard in Ferrol, Spain, and delivered during 2009.

Manning

The F-310 class frigates have a permanent crew of 120.

Overall dimensions

Length overall: 134.0 m

Maximum beam: 16.80 m

Maximum height: 31.0 m

Maximum depth: 7.6 m

Weight: 5,300 tons

Speed: 26 knots

Integrated weapon systems

Anti-air warfare missiles:

Vertical launcher system with evolved Sea Sparrow

Anti-surface warfare:

New Norwegian strike missile and OTO Melara 76mm gun

Anti-submarine warfare:

Sting Ray torpedoes, depth charges, NH90 anti-submarine helicopter with torpedoes

Integrated weapon sensors

Air and surface radar, identification friend or foe system, target illumination system, hull-mounted sonar, active and passive towed array system, electro-optical sensor system, radar electronic support system.

Romania

Conventional armaments in service, 2010

[a] The 43 quoted last year included 9 Puma helicopters (currently held on category IV and category V) that are unlikely to be restored to HC1 standard.
[b] HMS Trafalgar was removed from service in December 2009.
[c] HMS Invincible has been held in a state of very low readiness since 2005 prior to final withdrawal from service in 2010, and is not counted here.
[d] Two type-45 destroyers were delivered to the Ministry of Defence but are not yet in active service with the Royal Navy.
[e] The correct number of 16 should also be read in last year's return.

Procurement from national production

	260	HVM Starstreak missiles

Note: Procurement from national production is defined as complete weapon systems purchased by the Government from suppliers within the United Kingdom or from programmes in which the United Kingdom is a collaborative partner.

United States of America

Available background information on military holdings and procurement through national production

The following information is for the United States of America in calendar year 2009 and is set out in terms of the same categories as used for exports and imports.

Category (I-VII)	*Military holdings*	*Procurement through national production*
I. Battle tanks	6 242	0
II. Armoured combat vehicles	20 493	527
III. Large-calibre artillery systems	5 972	328
IV. Combat aircraft	3 756	57
V. Attack helicopters	1 662	1
VI. Warships	287	9
VII. Missiles and launchers	177 757	1 427

Notes: General Assembly resolutions 46/36 L (paras. 10 and 18), 47/52 L (para. 5) and 49/75 C (para. 4) invite all Member States to provide background information on relevant policies, national arms import and export procedures, as regards both arms transfers and the prevention of illicit arms transfers. Accordingly, previous United States submissions contained such information, which continues to be relevant.

The United States considers that its transfers of military equipment occur at the time the ownership title for the equipment is transferred between the United States and another country. The 2010 submission therefore includes equipment whose title was transferred during the 2009 calendar year.

IV. Information received from Governments on international transfers of small arms and light weapons

Annex

Views received from Governments in accordance with paragraph 6 (a) and (b) of General Assembly resolution 64/54

Colombia

[Original: Spanish]
[5 May 2010]

"6. Reaffirms its decision, with a view to further development of the Register, to keep the scope of and participation in the Register under review and, to that end:

"(a) Recalls its request to Member States to provide the Secretary-General with their views on the continuing operation of the Register and its further development and on transparency measures related to weapons of mass destruction;".

In order to ensure the usefulness of the Register of Conventional Arms, requests for data should be presented in such a way as to be more binding on States so that sufficient information can be obtained to provide a greater degree of transparency. Towards this end an effort must be made to expand confidence-building measures among Member States.

From a technical standpoint, thought should be given to an institutionalized process for revising the contents of the Register of Conventional Arms in order to keep up with ongoing technological progress in this field, which may not be captured by the categories of arms covered by the Register at the present time and to ensure that adequate information on the relevant arms is provided. With regard to information on transparency measures related to weapons of mass destruction, Colombia believes it is important that the Register should include information on weapons of mass destruction so as to provide a clear picture of the nuclear arsenals and other weapons of mass destruction that are in the hands of States. Such information would constitute a transparency measure and a negative assurance for those States which, like Colombia, do not possess such weapons.

"(b) Requests the Secretary-General to seek the views of Member States, including whether the absence of small arms and light weapons as a main category in the Register has limited its relevance and directly affected decisions on participation. ..."

Given the problems created for Colombia by illicit trafficking in small arms and light weapons, and the institutional efforts to eliminate this scourge, it is also important once and for all to include this type of weapons as a category in the Register; States must provide information on exports, imports and transfers of such arms in the interest of greater transparency, and such information must be reliable so as to allow for monitoring and greater control over transborder transfers in support of national efforts.

Japan

[Original: English]
[10 June 2010]

The 2009 Group of Governmental Experts (GGE) examined the possible inclusion of small arms and light weapons (SALW) as a new category in the United Nations Register from various perspectives and recommended that the Secretary-General seek the views of Member States, including on the question of whether the absence of SALW as a main category in the Register has limited its relevance and directly affected decisions on participation (paragraph 75, 2009 GGE Report). Subsequently, paragraph 6 (b) of resolution 64/54 also requested the Secretary-General to seek the views of Member States on this issue.

1. The Impact of the Inclusion of SALW on the Relevance and Universality of the Register

Japan considers that the absence of SALW as a main category in the Register could negatively affect the relevance of the Register. The purposes of the Register are to increase the transparency of mainly international transfers of conventional weapons, to build confidence among Member States and to prevent unnecessary military accumulation of such weapons. In that light, it is inappropriate for the Register not to include SALW, the transactions in which are enormous in comparison with those in the other seven categories. The Register needs to be updated in accordance with the current security environment of each Member State, in order to maintain its relevance. Japan is in favour of the inclusion of SALW, provided that such action has substantial support among Member States and that due consideration is given to the points raised in section 2 below.

Support for the inclusion of SALW as a new category seems to be gaining more ground, as the number of voluntary registrations of SALW by Member States has increased over the years. Since the 2003 GGE Report recommended registration of SALW transfers as background information, the number of States registering SALW transfers has increased significantly: registrations numbered 5 in 2003, 6 in 2004, 5 in 2005, 37 in 2006, 48 in 2007 and 48 in 2008. Since the introduction of the optional standardized form in 2007, the number of States registering SALW transfers has not grown fully. However, the data contained in these reports on SALW have gradually been enriched, and more than 100 States have been reported as SALW exporters.

The total number of States participating in the Register was 117 in 2005 and 113 in 2006. That figure fell to 91 in 2007 and 80 in 2008, showing a substantial decrease. The 2009 GGE, while not attributing the decrease to the introduction of the standardized form, did highlight the fact that the decrease in the number of "nil" returns for calendar year 2007 paralleled the decreasing number of reports filed. The Group also pointed out intensified conflicts, political crises and aggravated international security environments as factors in the decrease. The possible negative impact of the inclusion of SALW on the Register's universality seems minimal, taking into account as well that a consensus was almost reached among 2009 GGE members regarding its inclusion.

2. Points to Consider for the Inclusion of SALW as a New Category

Impact on national security and the issues an administrative burden and registration capacity

In establishing a new category of SALW in the Register, it is necessary to consider its impact on States' national security. From Japan's perspective, it is desirable to report only the total amount of SALW imported, and not the specific categories and the amounts, in order to prevent the formation and capacity of the special force concerned from being estimated by others. For some Member States, there are issues of an additional administrative burden or an insufficiency of registration capacity, if SALW becomes a new category. Thus, a flexible approach tailored to the particular circumstances of those States participating in the Register needs to be pursued when introducing SALW as a new category.

Argument concerning the need to focus on illicit SALW transfer

Some argue that the inclusion of SALW is not appropriate because the Programme of Action (PoA) focuses on the illicit trade in addressing SALW issues. However, considering the distinction between licit and illicit SALW is somewhat like contemplating two sides of the same coin: it is a distinction that is merely conceptual in nature. Under the International Instrument to Identify and Trace Illicit SALW, *all* SALW are marked so that States can trace those diverted from the licit market into the illicit market. In order to control illicit SALW brokering, that is, brokering without a licence, it is essential to establish a domestic licensing system in each Member State. It is likewise meaningful to include SALW in the scope of the Register, which requires reports on legitimate transfers, so that importing States may take appropriate measures for the safekeeping of transferred SALW and the prevention of their diversion into the illicit market.

3. Conclusions

Japan considers that the absence of SALW as a main category in the Register has been a negative factor for the Register's relevance. In light of the increasing number of States registering SALW transfers as background information, it is important first to create a new category for SALW, in order to ensure the relevance of the Register and to encourage SALW registrations. Only after that has been accomplished should we consider sub-category divisions and details of registration including a flexible approach, in order to facilitate reporting in accordance with the current security environment and registration capability of each Member State.

Japan basically supports the idea of the inclusion of SALW, provided that the definition of SALW and its operational aspects will be addressed in a flexible manner. In addition, views of Member States submitted to the Secretary-General and the current situation regarding participation in the Register, such as the number of SALW reports and the trend of the total number of participating States, must be carefully reviewed.

Mauritius

[Original: English]
[31 May 2010]

The absence of small arms and light weapons (SALW) as a main category in the Register has limited its relevance and directly affect the participation of Mauritius as a member country. Mauritius does not deal in the importation and exportation of conventional arms in the seven categories as listed in the United Nations Register of Conventional Arms.

Mexico

[Original: Spanish]
[5 May 2010]

Mexico believes that the formal inclusion in the United National Register of Conventional Arms of a category on transfers of small arms and light weapons would be a major step towards increasing transparency on arms, thereby helping to build confidence and security among States. Mexico is convinced that such information would help to combat the diversion of such arms into the illegal market and prevent irresponsible transfers of small arms and light weapons, which are a destabilizing element and a factor that fuels the activities of organized crime and the escalation of violence in conflicts, and contributes to the violation of human rights and international humanitarian law.

Singapore

[Original: English]
[7 June 2010]

The Government of the Republic of Singapore would like to express its continued support of the Register as a valuable global confidence-building mechanism, and is of the view that the Register continues to be relevant in its current form. On the reporting of transfers of small arms and light weapons (SALW), Singapore understands that there already exists an optional reporting form for this purpose, which may be utilized by States who find SALW reporting relevant to them. Singapore thinks that converting SALW into a main reporting category could make it onerous for some States to submit their main reports to the Register, and this may have a negative effect on their participation.

Switzerland

[Original: French]
[24 May 2010]

Importance and relevance of the United Nations Register of Conventional Weapons

Switzerland attaches great importance to the issue of transparency in armaments, believing as it does that such transparency will build confidence among States, help to eliminate misperceptions and thereby bolster international stability. In the view of Switzerland, the United Nations Register of Conventional Arms, as the only worldwide tool for transparency, is of particular importance in the light of import and export activities involving conventional weapons. Since the Register was established, Switzerland has submitted a report without fail.

For the Register to be effective, participation must be as universal as possible, a goal which the international community must therefore pursue. Such universal participation depends on a number of factors, prominent among which is the appropriateness of the Register's scope. It is unrealistic to expect that States will participate in a mechanism and continue to provide information if that mechanism is perceived as lacking in relevance.

Establishment and development of the Register

The United Nations Register of Conventional Arms was established in 1991 with the aim of enhancing confidence, promoting stability, helping States to exercise restraint, easing tensions and strengthening regional and international peace and security. When the Register was established, it was decided that the exchange of information in the context of the Register should relate to transfers of seven categories of arms,[a] mainly heavy conventional arms that would play a major part in a large-scale military attack. In actuality, the establishment of the Register was in large part inspired by the example of the invasion of Kuwait by Iraq and by the fact that the latter had been able to accumulate substantial stocks of heavy arms without arousing suspicion.

Since the inception of the Register, both the possibility and the necessity of expanding the scope of the Register have been envisaged. The importance of such a process was underscored in the very resolution by which the General Assembly established the Register (46/36 L). In other words, the importance of the Register being as relevant as possible for Member States was highlighted from the very beginning.

States in several regions, in particular Africa and Latin America and the Caribbean, emphasized early on that the seven categories of arms covered by the Register did not include the category that was of greatest concern to them in terms of their security, namely, small arms and light weapons (SALW). The need for the Register to include other categories of arms in order to reflect the concerns of all regions was very quickly stressed, as can be seen, for example, from the discussions in the First Committee of the General Assembly in 1994 or 1995 (A/C.1/49/PV.4, A/C.1/49/PV.5). The link between the relevance of the Register and participation in it had thus already been raised as an issue, for example, in 1995 by Nigeria, which highlighted the fact that the Register should cover all kinds of arms if it was to enjoy greater credibility and ensure that States would respect their reporting obligations.

The necessity of including SALW in the Register in order to make it relevant for all regions of the world has only increased in the intervening years. The reason for this is that it has become apparent that such arms play a central, if not the main, role in so many conflicts around the world. The problem gradually gained ground on the international community's agenda during the 1990s, resulting in the adoption by the United Nations of its Programme of Action on the illicit trade in SALW in 2001.

Consequently, the question of whether to add the category of SALW to the Register has been on the agenda of the different groups of governmental experts (GGEs) that are convened every three years by the General Assembly to review the

[a] Battle tanks, armoured combat vehicles, large-calibre artillery systems, combat aircraft, attack helicopters, warships and missiles or missile systems.

operation of the Register and consider whether any adjustments to it are necessary. These expert groups have not, however, produced any conclusive results. While the 2003 GGE broadened the Register's scope slightly to include some specific types of SALW (MANPADS, in particular) and created the possibility for States to provide on a voluntary basis information on transfers of small arms, and the 2006 GGE established a standardized reporting form for this purpose, to date it has not been possible through this process to establish an eighth official category under the Register covering such arms.

Participation in the Register and absence of a category for SALW

A look at the number of reports submitted to the Register confirms that the absence of SALW has an impact on the relevance of this mechanism and, indirectly, on the level of participation.

Thus, the level of participation in the Register is unequal from region to region. Participation is much weaker in the regions where States have consistently emphasized that SALW, not heavy conventional arms, pose a special problem for their security. Whereas more than 95 per cent of the countries of the Group of Western European and Other States and the Group of Eastern European States submit reports in connection with the Register, the number is much smaller for the Group of African States. Between 2000 and 2008, fewer than 25 per cent of the States of that region on average submitted a report for the Register. In addition, fewer than 25 per cent of States in the Caribbean have submitted reports in recent years.

Several factors may account for this imbalance in participation between the different regions. However, it would seem undeniable that the relevance of the Register plays a role in this respect. This reality is confirmed with regularity by the States of these regions themselves, which have emphasized this point, in particular in the regional workshops organized by the United Nations to promote the Register.

The number of reports submitted for the Register in recent years also seems to indicate that the absence of SALW does have an impact on the relevance of this mechanism and on the universality of its scope. The number of annual reports submitted to the United Nations has declined sharply in the past two years. It fell from 113 reports for 2006 to 91 for 2007 and 80 for 2008. This large reduction has come about almost entirely because States that have regularly reported "nil" in the past have stopped submitting information. In other words, the large drop is due to the absence of annual reports from States that have for years been reporting that they do not import or export any of the seven categories of arms in the Register.

As the representatives of several countries directly concerned have indicated, providing "nil" reports for several successive years leads in time to a questioning of the relevance of this action and of the Register, and to a kind of fatigue, and can result in the abandonment of the practice of submitting annual reports. Moreover, this trend has perhaps been intensified by the fact that the 2006 GGE failed to establish an official category in the Register covering SALW. Many States particularly affected by SALW were expecting such a step and were deeply disappointed by the fact that it did not materialize.

Conclusion

While several elements influence the level of participation in the Register, it is clear that the question of the Register's relevance plays a key role over the long term. One cannot expect that States will participate in a mechanism that does not take into account their primary concerns with respect to security. The fact that the absence of SALW from the United Nations Register of Conventional Arms, which has been the main concern about arms transfers for a significant number of countries for many years, has an effect on the level of participation in this instrument seems self-evident. It is, moreover, confirmed by the series of facts referred to above.

Switzerland therefore considers that this lacuna in the Register should be eliminated as soon as possible and that action on this is an essential factor in promoting the objective of the most universal participation possible in the Register.
